## PROFILE

Data-driven Business Analyst with a background in Business Analytics and Computer Science, skilled in leveraging Python, R, Power BI, Excel, and AI/ML techniques for data-driven decision-making. Experienced in building analytics platforms, anomaly detection pipelines, and interactive dashboards, with a strong foundation in data modeling, machine learning, and conversational AI concepts. Passionate about applying cutting-edge AI frameworks to enhance data accessibility and support business strategy.

## KEY SKILLS

- **Programming:** Proficient in Python, Java, HTML, and PHP, with experience in developing web applications, scripting, and software automation.
- **Data Analysis & Visualisation:** Skilled in R, Excel, Tableau, and Power BI to analyse large datasets, create insightful visualizations, and support data-driven decision-making.
- **Modelling & AI/ML:** Predictive modelling, anomaly detection, statistical learning, exposure to embeddings & RAG-based AI systems
- **Data Engineering:** Data cleaning, transformation, integration, and pipeline development (APRA/Oracle GL, Git workflow)
- **Critical Thinking:** Adept at solving complex problems, optimizing processes, and making strategic recommendations through logical reasoning and data-driven analysis.

## EXPERIENCE

**AustralianSuper – Data & Analytics Transformation Intern**
*Business Analyst / Data Scientist* July, 2025 – September, 2025

Delivered **finance-focused anomaly detection solutions by applying machine learning techniques**, strengthening reporting reliability, improving transparency, and supporting data-driven strategic decision-making.

- Designed and implemented **anomaly detection pipelines** using K-Means clustering, ARIMA time series models, and Isolation Forests, uncovering irregularities in weekly and monthly General Ledger (GL) transactions.
- Built automated **data cleaning pipelines** to standardize, deduplicate, and align cost-centre and account hierarchies, improving data quality and reporting consistency.
- Collaborated interdepartmentally with the **Finance and Data Science teams** to translate business requirements into scalable analytical solutions.
- Applied **Git** for version control to manage code development and ensure reproducibility across teams.
- Developed interactive **Power BI** dashboards for Finance stakeholders, enabling clear visualization of anomalies and improved decision-making.

**Monash University – Capstone Project**
Business Data Analyst & Visualisation Specialist March, 2024 – November, 2024

Developed a **data-driven election analytics platform** to analyse voting patterns and support strategic decision-making for student organisations. Focused on **data processing, visualisation, and insights generation** using Python and JavaScript.

- **Analysed** voting data to identify participation trends and engagement patterns, supporting data-driven decision-making.
- **Developed interactive visualisations** using **Python (Matplotlib) and JavaScript (D3.js)** to present real-time election trends and voting distributions.

- Designed and implemented an encrypted data processing pipeline to ensure data integrity, privacy, and secure handling of voter information.
- **Led Agile-based** collaboration, improving project coordination through sprint planning, backlog prioritization, and bi-weekly sprint reviews.

## EDUCATION

**Master of Business Analytics** January, 2025 - December, 2025
The University of Melbourne / Melbourne Business School

**Bachelor of Computer Science** March, 2022 - December, 2024
Monash University

- **Data Science specialisation**
- **H2A**

## ADDITIONAL

- Australian Visa Status: Temporary Graduate Visa (subclass 485)
- Languages: Mandarin, English
